1. Registration Test Cases

ID	Test Scenario	Expected Result
REG-01	Register with valid name, email and password	User should be registered successfully.
REG-02	Register with an already registered email	Error message should be shown.
REG-03	Submit registration with all fields empty	Required field validation should be shown.
REG-04	Enter an invalid email	Invalid email message should be shown.
REG-05	Enter a short password	Password validation should be shown.
REG-06	Password and confirm password are different	Password mismatch message should be shown.
REG-07	Enter maximum allowed characters	Data should be accepted.
REG-08	Enter more than allowed characters	Validation message should be shown.
REG-09	Enter special characters	Application should handle the input correctly.
REG-10	Enter only spaces in required fields	Registration should not be allowed.

2. Login Test Cases

ID	Test Scenario	Expected Result
LOGIN-01	Login with valid email and password	User should login successfully.
LOGIN-02	Login with wrong password	Error message should be shown.
LOGIN-03	Login with an unregistered email	Login should fail.
LOGIN-04	Leave email empty	Required field validation should be shown.
LOGIN-05	Leave password empty	Required field validation should be shown.
LOGIN-06	Enter invalid email format	Validation message should be shown.
LOGIN-07	Try wrong password many times	Failed login attempts should be handled properly.
LOGIN-08	Check the password field	Password should be hidden.
LOGIN-09	Logout and open task page	User should be sent to login page.
LOGIN-10	Refresh page after login	User should remain logged in.

3. Task Create / View / Edit / Delete Test Cases

ID	Test Scenario	Expected Result
CREATE-01	Create a task with valid data	Task should be created.
CREATE-02	Create task without title	Validation message should be shown.
CREATE-03	Use only spaces as task title	Task should not be created.
CREATE-04	Use maximum allowed title length	Task should be created.
CREATE-05	Enter more than maximum title length	Validation message should be shown.
CREATE-06	Create tasks with the same name	Application should handle duplicate names correctly.
CREATE-07	Click Create multiple times quickly	Only one task should be created.
CREATE-08	Refresh after creating a task	Created task should still be present.
VIEW-01	Open task list when tasks exist	User's tasks should be displayed.
VIEW-02	Open task list when there are no tasks	Empty task message should be shown.
VIEW-03	Create multiple tasks and view list	All user's tasks should be displayed.
VIEW-04	Refresh the task list	Tasks should still be present.
VIEW-05	Try to view another user's task	Access should not be allowed.
EDIT-01	Edit a task with valid data	Task should be updated.
EDIT-02	Remove required title while editing	Validation message should be shown.
EDIT-03	Save maximum allowed data	Changes should be saved.
EDIT-04	Cancel editing a task	Original task data should remain.
EDIT-05	Try to edit another user's task	Access should not be allowed.
EDIT-06	Refresh after editing	Updated data should remain.
DELETE-01	Delete an existing task	Task should be deleted.
DELETE-02	Cancel delete confirmation	Task should remain.
DELETE-03	Confirm delete	Task should be removed.
DELETE-04	Refresh after deleting	Deleted task should not come back.
DELETE-05	Try to delete another user's task	Access should not be allowed.
DELETE-06	Click Delete multiple times	Application should handle it without errors.

4. Input Validation and Error Handling

- Required fields should not be left empty.
- Spaces-only input should be rejected.
- Email format should be checked.
- Password rules should be checked.
- Maximum field length should be checked.
- Special characters should be handled safely.
- HTML or JavaScript input should not execute.
- SQL injection input should be handled safely.
- Server or database errors should show a simple message to the user.

- Technical error details should not be shown to users.
- Network failure should be handled properly.
- Multiple clicks should not create duplicate records.
- A user should only access their own tasks.
- Protected pages should not be accessible after logout.

5. Possible Bugs / Risk Areas

Bug	Severity	Description / Impact
BUG-01	Critical	A user may be able to view another user's task by changing the task ID. This is a privacy and security issue.
BUG-02	Critical	Passwords may not be stored securely. If exposed, user accounts can be compromised.
BUG-03	Critical	SQL injection may affect the database and could expose or change data.
BUG-04	Major	Clicking Create more than once may create duplicate tasks.
BUG-05	Major	A deleted task may come back after refresh if the database is not updated correctly.
BUG-06	Major	The app may show an edit success message even when the change is not saved.
BUG-07	Major	A very long task name may break the page or cause an error.
BUG-08	Major	Server errors may show technical details or stack traces to users.
BUG-09	Critical	A user may still open protected task pages after logging out.
BUG-10	Major	The same email may be allowed to create multiple accounts.

6. Testing Approach

- First test Registration and Login.
- Then check that users can access only their own tasks.
- Test Create, View, Edit and Delete one by one.
- Check that task data is saved correctly in the database.
- Test input validation and error messages.
- Test negative and edge cases.
- Retest important features after changes.
- Main flow: Register → Login → Create Task → View Task → Edit Task → Delete Task → Logout.
